

# OAK TUB SKIRT

Watertech's cabinet grade oak skirt is an excellent choice if a removable front access panel is desired. The oak skirt has a picture frame look that is easily installed with screws and oak screw plugs. Each oak skirt comes slightly oversized so the installer can cut or sand it if the opening is irregular. Installing an oak skirt can be done by any do-it-yourselfer/ Each skirt comes unfinished and can be stained or painted to match cabinets, millwork or even the tub itself. Should the pump or blower of the bath ever need service simply remove the oak caps and screws and remove the skirt. Tub models 6032Ultra, 7243 and 6043 require an additional 1" width for the skirt installation.

INSTALLER MUST PROVIDE FRAMING OR NAILERS IN THE TUB ENCLOSURE TO ATTACH THE SKIRT. THE SKIRT CAN BE ATTACHED USING NAILS, SCREWS, OR ANY OTHER SYSTEM THE INSTALLER DESIRES.
